Assessment

Hiring Funnel Dashboard

Introduction

In today's organizations, recruitment involves multiple stages such as application screening, interviews, offer release and candidate joining. However, many times hiring data is available in raw format and management is not able to clearly understand hiring performance.

To solve this issue, I created a Hiring Funnel Dashboard which provides a structured and visual representation of candidate movement across different hiring stages. The dashboard helps in identifying drop-offs, measuring hiring efficiency and understanding recruitment trends.

Problem Statement

The main challenge was lack of visibility in the hiring pipeline. The hiring team could not easily track:

- How many candidates applied
- How many were shortlisted
- Conversion rate between interview stages
- Where maximum drop-offs were happening
- Average time required to fill positions
- Hiring performance across different job roles and sources

Because of this, recruitment planning and decision making could become slow and less effective.

Scenario:

Management lacks visibility into hiring performance.

Task:

Create a dashboard (use sample/mock data if required) showing:

- Total applicants
- Stage-wise conversion rates
- Time to hire
- Drop-off points in funnel

Data Preparation

Since real company data was not available, mock hiring data was created. The dataset included candidate details, interview stage status, hiring source, job position and time-to-fill information.

Before building the dashboard, data cleaning was done by:

- Removing duplicate entries
- Handling missing values
- Standardizing status fields
- Converting date fields into proper format

This step was important to ensure correct calculations and visualization.

Position No	Position Name	Level	Business Head	Open Date	Open- Y/N	Candidate Name	Close Date	Recruiter
A10001	Product Manager	Senior	Jennifer Camper	7-Oct-25	N	Juliet Vest	30-Dec-25	Nyla Harper
A10002	Product Manager	Senior	Jennifer Camper	7-Oct-25	Y			Nyla Harper
A10003	Product Manager	Senior	Jennifer Camper	7-Oct-25	Y			Nyla Harper
A10004	Full Stack Develop	Senior	Ross West	4-Apr-25	N	Zetta Lomas	18-Jul-25	Nyla Harper
A10005	Full Stack Develop	Senior	Ross West	4-Apr-25	N	Zula Kawamura	20-Sep-25	Nyla Harper
A10006	Full Stack Develop	Senior	Ross West	4-Apr-25	N	Georgia Etter	22-Jul-25	Nyla Harper

Position No.	Position Name	Level	Application Status	Interview Level 1	Interview Level 2	Final Selection Status	Joining Status	Joining Date	CTC Offered in Lakhs	LV
A10042	Full Stack Developer	Junior	Shortlisted	Shortlisted	Shortlisted	Selected	Joined	6/11/2025	19.26124822	9/
A10014	Big Data Engineer	Mid	Shortlisted	Shortlisted	Shortlisted	Selected	Joined	9/1/2025	91.25607415	
A10037	Data Architect	Senior	Shortlisted	Shortlisted	Shortlisted	Selected	Joined	7/17/2025	21.98448394	
A10056	AI Engineer	Junior	Shortlisted	Shortlisted	Shortlisted	Selected	Joined	11/2/2025	33.23217059	

Dashboard KPIs

The top section of the dashboard shows key hiring metrics:

- Total Positions: 63
- Candidates Hired: 31
- Open Positions: 32
- Average Time to Fill: 78 days

These KPI cards provide a quick summary of hiring workload and efficiency.

Funnel Analysis

A funnel chart was created to track candidate progression:

- Applications Received – 101
- Applications Shortlisted – 72
- Level 1 Cleared – 50
- Level 2 Cleared – 35
- Offers Made – 35
- Candidates Joined – 31

From the funnel, it is clear that a significant drop occurs at the shortlisting stage. This suggests that many candidates do not meet the initial screening criteria.

Also, the final joining number is slightly lower than offers released, indicating possible candidate withdrawals or offer declines.

Stage Conversion and Drop-off Analysis

A separate visual was created to show stage conversion percentage and drop-off percentage.

It was observed that:

- Conversion from Application to Shortlist is around 71%
- Conversion reduces gradually in later interview stages
- Drop-off is highest in early screening stages
- Final joining conversion is relatively strong once offer is released

This analysis helps in identifying bottlenecks in recruitment.

Key Learnings

Through this project, I learned how data visualization can simplify complex recruitment data. Funnel charts helped in clearly identifying drop-off points, while conversion metrics helped in evaluating hiring efficiency.

I also understood the importance of proper data cleaning and KPI design in building meaningful dashboards.

Conclusion

The Hiring Funnel Dashboard provides a clear overview of recruitment performance and helps management take data-driven decisions. It can be further enhanced by integrating real HR systems and adding predictive analytics features such as hiring forecasts and candidate success probability.
